 **Nilfisk**

# Vacuum Cleaner

No matter how often you clean or what you clean, we have the machine that makes the job easier and the result better.

The range of indoor cleaning equipment includes:

**One Select**

**Elite Bravo**

**Family Business GM80**

# Other Nilfisk products

**Buddy & Multi**

**Smart**

**Central Vacuum**

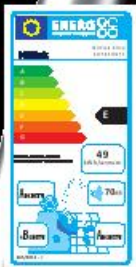

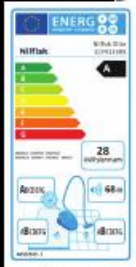

**Steamtec**

## Strong arguments

- Ultra+ Filtration comes in a machine that has:
  - High density dust bag
  - Airtight construction
  - HEPA H14 filter
  - Soft grip on handle
  - Remote control on handle to adjust level in suction power
  - Remote control with display and info center on the Superior model
  - Standby parking on Comfort and Superior models
  - Auto function in Nilfisk Comfort and Nilfisk Superior models

## Nilfisk Elite accessories:

1. Dust bags, high density. Item no. 107407940
2. Standard dust bag. Item no. 107412688
3. Starter kit. Item no. 107407952
4. Hard floor nozzle. Item no. 107409852
5. Turbo nozzle. Item no. 107409853
6. H14 HEPA filter. Item no. 107409854

Endorsed for:  
House dust mites, cat allergen, dog allergen, pollen

## Vacuum cleaning the easy way

A central vacuum cleaner does away with all that. It is noiseless, odour free, lightweight and extremely handy, turning a repetitive domestic chore into an agreeable easy-to-do job. With the central power unit (combined motor and dust container) stowed away on the loft, in the basement, or in some other remote location where it bothers no one, it is out of the way, and the only thing you need to carry around when vacuuming is the hose itself.

With a convenient number of wall inlet valves installed throughout your home you can move the hose from inlet to inlet so as to cover the entire area of your home. The inlet valves are connected to the power unit through tubing. The tubes transport the dirt to the central dust container, and you never have to deal with it except for once or twice a year when the container needs emptying. It is an extremely convenient, hygienic and flexible system that is adaptable to homes of all sizes, houses and apartments alike.

Technical Specifications	Supreme 150	Supreme 250	Supreme LCD

## Buy it all in one box - Install in only one weekend

Just as easy to install in old houses as in new-build. The suction unit can be located anywhere in the house, and you only need access to it a couple of times a year to empty the container.

Concealed and discreet installation is always possible, as the pipes needed for a Nilfisk central vacuum cleaner can be installed in a wide range of locations throughout the house: loft space, basement, high cabinets or garage.

Once you have decided where to locate the central unit you can plan where to position your wall sockets.

Supreme 150

Supreme 250

Supreme LCD

Nilfisk All-in-1 supplies everything you need. To make installation more convenient, kits are designed to fulfill what is needed in most houses.

### The All-in-1 boxes from Nilfisk contain:

- 1 machine (Supreme 150, Supreme 250 or Supreme LCD)
- 1 hose of your choice ( Manual, Wireless+ or Deluxe)
- 3 DESIGN inlets in either white, alu/black
- Fitting and pipes

# Nilfisk Wet and dry vacuum cleaners

Push & Clean is a semi-automatic filter cleaning system that makes it easy and fast to clean the filter ensuring continued high performance. All you have to do is to hold your hand close to end of the tube to block for air intake and push a button. Now the filter is cleaned in a short while.

## What is HEPA and why is it important?

**HEPA filters are gaining in popularity every year and it's not hard to figure out why. The HEPA filter offers the best solution to contaminated indoor air.**

Most household pollutants are invisible. The heavier ones are pulled to the ground by the force of gravity, but lighter gases and particles remain airborne. Most of these airborne particles are invisible to the human eye. The removal of such particles need to be secured by using the right vacuum cleaner.

Here are a few things to consider when purchasing a vacuum cleaner with a HEPA filter.

- The HEPA filter should be placed after the motor to ensure that the exhaust fan is releasing clean air.
- The HEPA filter component and vacuum cleaner needs to be completely sealed so that contaminated air cannot be released into the environment.

At Nilfisk we strive very hard to develop and produce vacuum cleaners that live up to the highest standards.

That is why we took these standards and added yet another factor; the high density dust bag, equally important in order to qualify a vacuum cleaner to achieve the Ultra+ Filtration seal.

Filtration sealed machines are the only way to trap contaminants such as pollen.

A vacuum cleaner with a good HEPA filter and Ultra+ Filtration is a bit more expensive than regular vacuum cleaners, but is a good investment for anyone who cares about the quality of their home environment.

*Allergy UK's Seal of Approval; look for products knowing they have been tested and approved by an internationally recognised organisation with very high standards, or reviewed by leading allergy specialists.*

*Seal of Approval, Nilfisk Development and Engineering Division*

## What is this energy label?

As of September 1st 2014, the European Union introduces new regulations; Energy labeling and Eco design requirements in order to reduce the energy consumption of vacuum cleaners in the EU.

This will make it illegal to sell vacuum cleaners with excessively high power consumption and poor cleaning performance within the EU. The regulation states the maximum rated motor wattage will be less than 1600, and from 1st of September 2017 the maximum rated motor power, will be less than 900.

Furthermore, it will be mandatory for all manufacturers to label their vacuum cleaner performance, making it easy for customers to compare products.

### Why is this good for the consumer?

It will be much easier for the consumer to compare the different vacuum cleaners in the shops. As a consumer you will be able

to compare on many different parameters. The most important being: Energy efficiency, Dust Pick up on carpets and hard floor, Sound level and Emission (filtration).

For the European Union, a calculation shows that the EU countries will save 18 TWt (One Terawatt is equal to one trillion ( $10^{12}$ ) watts) per year. That is more than the combined energy usage in some smaller countries.

We are looking forward to continue developing exciting products within these regulations.
